-!- FUNCTION: Binds to the 238 rRNA.
-!- SUBUNIT: Part of the 508 ribosomal subunit. Interacts weakly with proteins L3 and L6.
-!- SIMILARITY: Belongs to the ribosomal protein L13P family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    X-RAY CRYSTALLOGRAPHY (3.0 ANGSTROMS) OF THE 50S SUBUNIT IN COMPLEX WITH FIVE ANTIBIOTICS AT THE PEPTIDYL TRANSFERASE CENTER. Natl. Acad. Sci. U.S.A. 100:11690-11695 (2003).
-!-FUNCTION: Involved in protein export (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SIMILARITY: Belongs to the secx/SEC61-alpha family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pfam; PF00344; SecY; 1.

An integrated analysis of the genome of the hyperthermophilic

Tachaeon Pyrococcus abyssis.";

Tachaeon Pyrococcus abyssis.";

Mol. Microbiol. 47:1495-1512(2003).

-I- FUNCTION: Exchanges the guanine residue with 7-aminomethyl-7-

Geazagnanine in tRNAs with GU(N) anticodons (tRNA-Asp., -Asn.,-His

and -Tyr). After this exchange, a cyclopentendiol moiety is

attached to the 7-aminomethyl group of 7-deazaguanne, resulting

in the hypermodified nucleoside queuosine (Q) (7-(((4,5-cis-
dihydraxy-2-cyclopenten-1-yl)amino)methyl)-7-deazaguanosine) (By

"Genome-based analysis of virulence genes in a non-biofilm-forming
Staphylococcus epidermidis strain (ATCC 12228).";

Mol. Microbiol. 49:1577-1593 (2003).

-!-CATALYTIC ACTIVITY: ATP L-isoleucine + tRNA(Ile) = AMP +

diphosphate + L-isoleucyl-tRNA(Ile).

-!-COFACTOR: Binds 1 zinc ion per subunit (By similarity).

-!-SUBUNIT: Monomer (By similarity).

-!-SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!-SUMILARITY: Belongs to the class-I aminoacyl-tRNA synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-MAR-2004 (Rel. 43, Created)

                                                                                                                   Pragai Z., Tjalsma H., Bolhuis A., van Dijl J.M., Venema G., Bron S.; Submitted (FEB-1996) to the EMBL/Genbank/DDBJ databases.
-!- CATALYTIC ACTIVITY: ATP + L-isoleucine + tRNA(Ile) = AMP + diphosphate + L-isoleucyl-tRNA(Ile).
-!- COFACTOR: Binds I zinc ion per subunit (By similarity).
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLUIAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the class-I aminoacyl-tRNA synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Brettin T.S., Bruce D., Challacombe J.F., Gilna P., Han C., Hill K.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Cloning and characterization of a microsomal aminopeptidase from the intestine of the nematode Haemonchus contortus."; blochim. Blophys. Acta 1338:295-306(1997).

-! CATALYTIC ACTIVITY: Release of an N-terminal amino acid, Xaa-|- Xbb- from a peptide, amide or arylamide. Xaa is preferably Ala, but may be most amino acids including pro (slow action). When a terminal hydrophobic residue is followed by a prolyl residue, the two may be released as an intact Xaa-Pro dipeptide.
-!- COPACTOR: Binds I zinc ion per subunit (By similarity).
-!- SINCELLULAR LOCATION: Type II membrane protein (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-NOV-1997 (Rel. 35, Created)

-!- CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the cation transport ATPases family (P-type ATPases). Subfamily IV.

Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-! CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.

-! SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUB SPECIFICITY: Found in most tissues except spleen and muscle. Most abundant in testis. Also detected in fetal tissues.

-!- SIMILARITY: Belongs to the cation transport ATPases family (P-type ATPases).
                                                                                                                                                                                                            Gaps
